

R. Brandon Plentl

Senior Software Engineer (Full Stack)

Fort Worth, TX 76137 | 214-702-2519 | bplentl@gmail.com | [linkedin.com/in/MrPlentl](https://www.linkedin.com/in/MrPlentl)

Senior Full Stack Engineer with 15+ years of experience building cloud-native, enterprise-scale platforms supporting 200K+ users across global data centers. Specialized in backend architecture, microservices, and DevOps automation, with a proven record of improving system performance, reliability, and developer efficiency. Strong collaborator who bridges product, infrastructure, and engineering teams to deliver scalable solutions.

Core Competencies

REST & Event-Driven APIs | CI/CD & DevOps Automation | Microservices Architecture | Database Administration
Performance Optimization | Authentication & Authorization (JWT) | Cloud-Native Applications

Technical Skills

Languages: JavaScript (TypeScript, API Integration), PHP (OOP, Laravel), HTML5, Tailwind CSS, SQL, Golang
Frameworks: NodeJS (Express, RESTful API), ReactJS (Context API, NextJS), ExpressJS (APIs, Web Apps), Laravel
Other: CI/CD Pipelines (GitHub, Jenkins), SQL Databases (MySQL, PostgreSQL), Apache Web Server, Unit Testing (Jest, PHPUnit), WordPress (Theme & Plugin Development, Deployment), Agile/Scrum, LAMP Stack Deployment

Professional Experience

Full Stack Engineer | IBM | Dallas-Fort Worth, TX

03/2018 – 12/2025

Architected and developed cloud-native microservices and distributed systems powering IBM's Cloud Support Center, serving 200K+ accounts across six global data centers. Led full-stack development while driving DevOps automation, CI/CD efficiency, and cross-platform integrations (ServiceNow, Salesforce).

- Improved accessibility and support workflows across IBM's cloud console by building an in-context support module, enabling ticket creation from any page while enriching submissions with resource-specific diagnostic metadata.
- Improved dashboard performance and reliability by identifying excessive catalog lookups and implementing a targeted caching strategy, significantly reducing load times and network overhead.
- Increased engineering efficiency by developing permission-controlled internal tooling that enabled support leadership to independently manage database migrations, cross-system API updates, and configuration changes.
- Acted as technical lead for internal support platform initiatives, partnering with product, support, and infrastructure teams to design scalable solutions and guide implementation.

Microservices & Distributed Systems

Developed backend microservices and integrations focused on scalability, performance, and maintainability.

- Enabled real-time communication and seamless data synchronization across internal tools by designing and implementing RESTful APIs.

Cloud Infrastructure & DevOps

Migrated and optimized databases across Oracle, MySQL, and PostgreSQL environments.

- Boosted deployment reliability and reduced delivery time by automating CI/CD pipelines (GitHub Actions, Jenkins).

Frontend & Platform Development

Collaborated with cross-functional teams to plan, prioritize, and deliver releases within an Agile/Scrum environment.

- Reduced manual workloads 99% by building internal tools for leadership to automate configuration updates and cross-system synchronization.

Webmaster | DAYSTAR TELEVISION NETWORK | Bedford, TX

04/2011 – 03/2018

Spearheaded full-stack development and cloud deployment for 15+ enterprise websites (including Daystar's flagship site) and custom online giving platform, serving thousands of daily visitors worldwide. Managed AWS and Azure cloud integrations while building scalable, secure web applications supporting global streaming and donations. Implemented and managed email marketing via MailChimp. Handled campaign creation, list segmentation, and performance tracking.

- Improved video quality and user reach by replacing the legacy delivery system with a modern, HTML5-driven web player capable of adaptive multi-bitrate streaming. Enabled full-HD livestream and on-demand video services with mobile-friendly formats and wide accessibility.
- Facilitated online giving by creating a scalable platform capable of handling thousands of transactions per second while providing a secure workflow, allowing payment processors to run batch-payments efficiently and safely.
- Expanded functionality by engineering API integrations for zip code search, live program scheduling, and donor data synchronization.
- Ensured high uptime and optimal site performance by closely monitoring system stability.
- Provided customer support for digital platforms, including giving site, livestreams, and eStore.
- Managed AWS and Azure cloud deployments, optimizing scalability and server performance.

Prior Experience

Development / Technical Support / Project Manager | DATAVOICE INTERNATIONAL | Allen, TX

Education

Associate of Applied Science in Computer Software Engineering | ITT TECHNICAL INSTITUTE | Richardson, TX
